

## BIOLOGY

Curious students who enjoy the study of living organisms make good biology majors. Do you have a passion to study dolphins or test the waters of a nearby stream? Manchester professors will help you chase your dreams.

### side *by* side

- When Ashlee Light '09 signed up for Invertebrate Zoology, she had no idea that she and her classmates would be catching invertebrates from the nearby Eel River. To demonstrate for timid students, Dr. Jerry Sweeten took off his shoes and socks, rolled up his pant legs and waded in the water to get better samples.
- Nate Stewart '08 worked as a biology intern with Dr. David Kreps, isolating bacteria from nearby Pony Creek. Nate's love for research and solving problems fits well with his decision to go to medical school.

### academics *that* matter

Biology professors at Manchester are not only teachers who love their work, they're scientists too. In the field or the

laboratory, they include students in their research, passing on their passions. Manchester faculty have high expectations. Hard work is a prerequisite. But students at Manchester love the challenge—and the rewards.

### SUCCESS

- Landing an internship with the U.S. Department of Agriculture helped Bruce Brainbridge '08 get hands-on experience and network with others in his field. He worked as a fisheries technician for the U.S. Forestry Services at the Shawnee National Forest in southern Illinois.
- Jami Schrader '08 has had experiences of a lifetime, all before she was a senior at Manchester College. It all started with her passion to be a marine biologist and an off-campus summer class to Andros Island, Bahamas. From there Jami worked at the Fort Wayne Zoo's aquarium; and then a dream-come-true internship with the Shedd Aquarium in Chicago.

I FOUND

... ADVENTURE

opportunity to go to Hubbard Brook, N.H. where Gene Likens, an MC grad, discovered acid rain. I was able to explore the facility and meet and talk with Dr. Likens. This was one great experience!

Jeff Grabowski '09, biology major
