

CHEMISTRY

Why study chemistry? Because you want to, and because you can go to grad school or get a job. Good answers. But first, find your place in the chemistry lab, conduct research with your favorite professor or join a medical team to Nicaragua. Not only are the opportunities great for your resume, but you will be amazed at how exciting learning can be.

side *by* side

- Along with Professor Osborne, Kelli Gates '09 researched the degradation of ritalinic acid during the summer of 2007, then went with a team of students and doctors on the medical practicum to Nicaragua in January. Kelli is now applying to dental school.
- Levi Hauptert '07 spent a summer working with a former MC faculty member for NASA in Cleveland. Levi's now at Purdue working on his Ph.D. "Who knows?" Levi said, "I might end up inventing a new kind of glue for shoes, one that doesn't produce toxic vapors."

academics *that* matter

Manchester has a history of producing exceptional graduates in the sciences. Studying chemistry at MC

means you're going to have a good reputation even before you get out the door.

- Almost immediately Fiona Mills-Groninger '08 hit it off with her professor. Together, they talked about goals, ideas, careers. During her sophomore year, Fiona was accepted to Purdue, Penn State and Loyola University for an internship. She chose Loyola because it was close to home. It paid well, including plane fare to Washington D.C. for a field trip. Last summer, Ames University's highly competitive national laboratory chose Fiona to work with them. All this before she even graduated from MC!

SUCCESS

- Nicolaas Vermeulen '05 did orthopedic research three summers at Biomet in Warsaw, Ind., and is now getting a Ph.D. at the University of Illinois at Champaign.
- You might think studying organic chemistry is tough. Try taking it in France in French! Corinne Lipscomb '06 did and transferred credits toward her MC degree.

I FOUND

... COMMUNITY

I liked how I was treated from my very first visit to MC ... I felt as if I was already an important part of the school. I love the sense of community—between friends, professors, coaches—everyone is so accessible.

Kelli Gates '09, chemistry major
