

COMPUTER SCIENCE

Push a button. It works. Good job. We're done. Not exactly. Computer science is much more. Problem solving, yes, but finding the most efficient, cost effective way is more like it. Understanding how a program manages a database, integrating systems and software, that's what Manchester's computer science program is all about.

academics *that* matter

No matter your major, minor, or whether you're going for the two-year computer applications degree, at Manchester, you'll pick up skills that are marketable. For example, you'll learn communication skills you can use with clients and customers. You'll become comfortable making presentations. And if you want more technical skills, take our class on web design that deals with e-commerce, managing databases and forms that will give you a heads up on the technical side of how web pages work.

side *by* side

- Stephanie Knox '07 checked in with Liz Bushnell, the director of career services, when she was looking for a summer job. It's a good thing, because

a company, Visionary Support, needed an intern in PC sales and support. Stephanie got the job.

- Andrew Kauffman '07 had been taught to think through problems and to ask probing questions in his classes. He didn't realize how much value that was until he was able to help solve a systems problem in audio-controlled manufacturing as an intern with Heckman Bindery.

SUCCESS

- Stephanie Knox's internship paved the way for her to pursue other opportunities. She accepted a software engineer position with Raytheon in Fort Wayne several months prior to graduation.
- Georgi Chunev '08, is a Ph.D. student at Indiana University and studying data visualization especially as applied to scientific contexts.

I FOUND

... COMMUNITY

Ever since I was a little boy in Uganda, I wanted to come to Manchester. The best thing about being a student here is that the school has all the facilities you need to excel in school and after. I always thought I would have to choose between my two interests—computer science and music. But at Manchester, I can do both, and more!

Anthony Balagadde, '10, computer science major
