

INFORMATION SYSTEMS

If you have an interest in computer systems, but you want more career options, Manchester has a good solution. Add a minor in information systems to another major and increase your career choices. Exciting possibilities come from finance and information systems combinations, or business, management, marketing or accounting duos. Or add the information systems minor to a math or computer science major. You'll have extra computer and business knowledge going into the workplace and a way to set yourself apart from others in a competitive job market.

academics *that* matter

At Manchester, your professors want you to succeed. Their doors are open and they welcome you to ask questions when you don't understand. They also challenge you to figure out problems yourself. Explore, discover your passion and your place at Manchester. When you do, faculty will be there to encourage and support you.

SUCCESS

- According to July 2007 issue of *Computerworld*, the shortage of employees with technology skills is real. Graduates who have computer skills will

be in high demand—particularly those skills that include interface design, data management, and techniques to improve computer performance. The courses you'll take for the information systems minor include problem solving in areas such as these.

- In addition, Manchester College students graduate with interpersonal and communication skills that prepare them to interact well with clients. They learn how to research, analyze and think through difficult problems, and often have opportunities to present their findings to groups and organizations—a combination of skills and experience that leads to success.

I FOUND

... GREAT FRIENDS

I found great friends at Manchester, the kind I know I'll have for the rest of my life, and who I know will be there for me if I ever need them. I've also found that my professors and advisors really do care about me and my success, and they're willing to answer whatever questions I have and help in anyway they can. For example, my professor encouraged me to add the information systems minor to my major to help me stand out

from other grads. Many accountants don't know about computer systems and networks, just as most computer people don't understand accounting principles. I'll have both in one package ready for the job market.

Kelli Barkey '08, accounting major

Find your place.

Find your place at Manchester among students who are excited about learning, in courses designed to give you what you need, and with professors who want the best for you.
